## *what is microdermabrasion?*

Microdermabrasion has become the leading technique for skin rejuvenation, due to its simplicity and effectiveness. Operating by means of a closed loop vacuum system, the machine delivers a precisely controlled volume of crystals to the outermost layer of the skin (the epidermis).

The epidermis is subjected to attack on a daily basis. By removing or breaking up this layer using microdermabrasion, the body is forced to replace the aged skin cells with new, healthy ones.

Fine lines, blemishes and scarring appear reduced. The manual action of microdermabrasion increases the natural production of collagen and elastin providing firmer, fresher and smoother skin.

## *how many treatments will I need?*

A normal course varies between six to ten treatments, ideally at weekly intervals. After your initial course, we recommend a treatment once every four weeks to maintain fresher, more youthful skin.

The epidermis should be fresh, firm and able to breathe. New cells cannot surface through old, blocked and damaged skin. Silhouette microdermabrasion immediately delivers the desired result.

## Some of the responses we have received from our clients:-

My session of Microdermabrasion with Debbie was amazing. The process seemed to instantly make way for new fresh skin to come to the surface. My skin felt refreshed even as the process was taking place. The lack of chemicals and lasers seemed a more natural solution to traditionally harsh exfoliation. I read up on Microdermabrasion before my treatment and was concerned about the suggestion of pain - nonsense. I found it very relaxing.
